

# **Wireless Community Intranet Announced**

## **Atlanta-based software developer enhances industry-leading intranet technology**

**Atlanta, GA (September 19, 2002)** - Resident Interactive announced today that it has enabled wireless access to its community intranet application.

Residents who have a web-enabled mobile phone will soon be able to login to the community intranet and perform the same functions as those logging in via computer.

"As web-enabled mobile phone usage proliferates among the user population, we fully expect that access to our intranet sites from mobile phones will supplant access via computer" predicts Dennis Papalois, President of Resident Interactive. "There is a buzz of excitement around web-enabled mobile phones yet there must also be compelling uses that leverage this technology. Our application is a killer-app that makes practical use of web-enabled mobile capabilities."

"We developed our wireless web application using Oracle 9i and the Sony Ericsson T68i mobile phone as a test platform.

### **Ultra-local Community Information on Your Mobile Phone**

Residents can access all areas of the Community Intranet using a web-enabled mobile phone. Once a resident logs in to the wireless intranet, they are greeted by the community welcome page that summarizes all of the events, news and alerts from the community. Homeowners can RSVP for an event, reserve a meeting room at the clubhouse, vote in a HOA election, or schedule a baby-sitter.

### **Availability**

Resident Interactive has successfully completed initial development of its wireless access capability and is currently undertaking user interface design and usability testing. The Company is scheduled to make wireless access generally available to over 800 communities during the first quarter of 2003.

### **About Resident Interactive**

Founded in 1999, Resident Interactive is a leading provider of advanced community intranets. The Company has deployed hundreds of intranet applications across the US with its unique approach of offering highly customizable yet turn-key technology that combines maximum flexibility with an easy-to-use user interface. Based in Atlanta, GA, Resident Interactive's application is built on industry leading Oracle database technology.
